

## Pallagi 5

Male Sterile Hybrid

<b>Origin:</b>	Hungary	
<b>Breeder:</b>	Agroport-D Kft.	
<b>Contact:</b>	www.agroport.hu	
<b>Type:</b>	filler	
<b>Description</b>		
<p>This F<sub>1</sub> hybrid is tall with large leaves and the edges curving down. The number of harvestable leaves is 22 to 24. Growth rate is good both in the seedbed and in the field. The ripening rate is medium-late. This cultivar has high level of resistance to potato virus Y, tobacco mosaic virus and black root rot as well. Yield potential is high (3000-3200 kg/ha). If properly cured it will produced good quality leaf tissue with good colour. The chemical and smoking quality is good.</p>		

### MAIN CHARACTERISTICS

<b>Resistances:</b>	
<b>Black root rot:</b>	R
<b>Powdery mildew:</b>	nd
<b>Blue mold:</b>	S
<b>PVY:</b>	R
<b>TMV:</b>	R
<b>Nematodes:</b>	nd
<b>Other:</b>	

R: resistant – S: sensitive

nd: no data

<b>Production data (2010):</b>		
<b>Country:</b>	<b>Acreage:</b>	<b>% of total acreage:</b>
Hungary	880 ha	50 ha
